into evening elegance*

# Low Voltage Outdoor Lighting Systems

- Typically have 1/3 the operating costs (power consumption) of high-voltage systems
- LED lamps & home automation system control options trim additional costs year-round
- Less disruptive installation methods
- Designed with flexibility, serviceability & expansion in mind
- Typical project range \$2000 to \$5000

**10-Year  
Warranty!**

on fixtures, transformers,  
controllers & cabling,  
unless otherwise  
specified.

### Expert Design

Our systems are designed on-site at night with the customer, assuring 100% satisfaction. Your design will achieve the most aesthetic nighttime ambience possible. We also make sure to meet special needs as well as safety, security, and budget requirements. With an evening demonstration, our customers can SEE the result before committing to the investment. System installation, expansion, control, service, and maintenance are fully explained during evening design sessions.

### Products

As a performance contractor, our product is your experience and satisfaction! We want to be sure your lighting system looks great all night, every night. To give you the best custom lighting system possible, we use top lighting equipment manufacturers such as CAST, Clarolux, Unique Lighting Systems, and many others. Each fixture and component is accurately configured to meet the application requirement. All cabling is professional-grade and variable-gauged for maximum safety, performance, and resistance to oxidation.

### Installation

We use professional methods to ensure quality and integrity at each fixture per specification. Special care is taken with underground cabling so it will not be disturbed by edging and aeration equipment. Transformers are never overloaded and each system is installed to overcome long-distance voltage loss. In a typical system, one or more transformers can be installed outdoors, in a crawl space or utility room, or other specified locations to optimize power distribution. Most customers choose to control their system with a programmable wireless controller, eliminating the need to interface directly with a transformer.

Carolina Outdoor Lighting Professionals, Inc. is happy to coordinate with local contractors for a particular project. We can also refer customers to a variety of local businesses and professionals.
